• Camp 1A Mr. GC U816 - This bull's sire Grand Canyon needs no introduction, and his dam is out of the foundation Buffalo Creek herd known for moderate framed easy doing cattle. As you would expect he is moderate framed, deep ribbed and very stylish. He has a very balanced EPD profile that we feel is important. You could wear out a good pickup looking and not find a more complete package than this bull provides.

Lot 64 - CAMP 1A Javelin U810

• Camp 1A Javelin U810 - Our cornerstone donor cow is the Crystal J1350. She has sold over \$100,000 in progeny for us and still produces the best ones. She seems to match up to whatever you mate her to. However the Javelin's were a great fit for numbers and phenotype with Crystal. Note the very balanced EPD profile including low birth, low maintenance, high stayability, and top 1/3 of the breed for carcass traits. This bull can do it all. You will not be disappointed in the Crystal sons.

CAMP 1A Cherokee U811

• Camp 1A Cherokee U811 - Some bulls write a new Chapter for their breed, Cherokee wrote a whole novel for Red Angus. We learned early on that he was a great fit to the Leachman Lan cow that we bought at the Leachman dispersal in Montana. (Ask Jerry about our trip) The Lan cow had already developed a reputation in their herd and she has not missed a beat for us. She quickly made it to our donor pen. Note the balanced EPD profile that Camp 1A strives to produce every time. Sometimes great bulls are mated by chance but not this one, it was all planned and worked just like we expected. Heifer bull prospect.

Why Red Angus?

Red Angus cattle offer many desirable traits for any cattleman, including:

- **Maternal excellence** - Red Angus cattle are easy calvers who produce high volumes of milk, are excellent mothers, and wean heavy, healthy calves.
- **Fertility** - Reproduction is the number one factor that influences profitability. The number and value of the calves on the ground at the end of calving season represents the potential economic return you will receive from your herd bull investment. Red Angus breeders have focused on increasing the performance of their cattle, but have not lost sight of the importance of calving ease. As a result, the genetic trends of Red Angus show a strong increase in growth with only a negligible change in birth weight. Red Angus cows are early maturing, easy breeders who deliver live, vigorous calves and breed back within a very short time.
- **Disposition** - No one wants to be chased across their farm by an unruly animal. The gentle dispositions of Red Angus cattle make them a pleasure to own and work with regardless of your age, location or facility set up. Red Angus replacement females are moderately framed, easy calving and easy fleshing. Because of their gentle dispositions, many youngsters enjoy working with Red Angus cattle in junior projects through 4-H and FFA.
- **Efficiency (grass & grain)** - Because Red Angus have maintained a moderate frame size they can produce ideal carcasses at industry acceptable weights whether they are backgrounded or go straight into a feedyard. In addition, Red Angus are considered trouble free cattle in the feedyard; they start easily on feed and have outstanding appetites. The quiet disposition of Red Angus cattle is especially appreciated by feedyard managers. Research and experience has shown that mild disposition cattle usually have higher average daily gains and lower incidence of dark cutters. On the rail, the carcasses consistently meet industry demands.
- **Due to numerous natural advantages**, "Angus" serves as the common denominator in crossbreeding programs throughout the country. When you are getting ready to invest in a herd sire or replacement females, invest in the future. RA meet the demands of today's cattle industry and offer the greatest number of advantages for profit minded producers.
