• GRU 744W is one of the thicker ended bulls out of the flush. These flush brothers were raised by some first calf heifers and we are publishing their actual weaning weights since they were all born within 3 days and were all on first calf heifers. The EPD's reflect the true performance of these bulls, since they weren't raised by their genetic mother.

*A Gelbvieh bull sired by GRU Mustang 019 was the highest gaining bull in the 49 year history of the Tifton Bull Test. Over 7218 bulls have been tested over the past 49 years. The son of GRU Mustang 019 had an Average Daily Gain of 6.45 lbs/day. This bull was purchased by Wagner Performance Cattle in Georgia for only \$3,000.*

## GRU Mr New Present 728W
